

Grossmont College Classified Senate Committee Report

Committee Name: Public Safety & Emergency Preparedness Council

Date: 02/14/18

Classified Attendees/Reporter: Elaine Adlam

Agenda Item & Information:

1. SDG&E EV Station Discussion:

SDG&E has decided that both campuses qualify for EV stations. Each port will cost \$600 with a minimum of 10 ports. Although the cost might seem high, they would oversee the entire construction project and will be responsible for the maintenance of the ports for 10 years. Bringing the total cost per campus to about \$6500.

A site walk is set for March 6th to discuss the pros and cons for both campuses and possible locations for ports.

After meeting, a proposal will be drafted and taken to the Site Facility and Sustainability Committees for further discussion.

2. Emergency Operations Center (EOC) tabletops:

Grossmont College will host a multi-agency Emergency Operations Drill. No one will know what the situation will be until the day of. EPC and EOC's from both campuses are invited to participate.

3. Door Lock Discussion:

Ken Emmons discussed the District Standards currently in place regarding classroom doors. The 600 page Procedures includes everything from glass to plant selection, including changing the inside locking mechanisms. The doors will still lock/open from the outside with a key for daily use. The new village located at Grossmont College is equipped with said mechanism. These standards have been provided to architects for future construction at both campuses.

The AFT guest representative, Michael Golden, indicated a concern that the standards may not be the best practice and said his union is also concerned there hasn't been a comprehensive recommendation yet of what to do on all existing doors. He also said he is willing to test out the new hardware and allow time for research of methods. There was agreement in the Council to establish a process and timeline, at our next meeting, to review the standards and make recommendations.
